Skills

Positions

Front End, Full Stack, Software Engineer

Core skills

Angular, React, Typescript, JavaScript, HTML/CSS

Other skills

Java, C++, Vue.js, C#, SASS

Work eligibility

EU

Preferences

Work type

Remote, open to Onsite or Hybrid

Tech stack/Tooling

Angular, React, Java, Python

Languages

English (fluent)
Spanish (fluent)
French (beginner)

Experience

Frontend Developer, A2 System

11/2023 - Present

Málaga, Spain

Development of web applications using Angular, TypeScript, RxJs, PrimeNG, PrimeFlex and Firebase. In charge of different tasks, from the development of new components and designing UI elements, to migration of libraries and Angular version upgrades of different projects.

Fullstack developer, Kokopilot

06/2021 - 09/2022

Remote

Worked as a freelance with an international team developing and improving the onboarding function of kokopilot.com, a tool to create websites by responding a series of questions. Used React for the front end, PHP for the back end and SQL for managing the database. We used AWS CodeCommit and Bitbucket for the code management of front and back end respectively, communicated via Discord and organized our tasks using Asana.

Web Developer, Freelance

06/2020 - 11/2023

Remote

Developed an e-commerce website for a new clothing brand using React, Material-UI and Stripe for the payments infrastructure, and a responsive web page for a newly created company dedicated to neuropsychology using Vue.js and Bootstrap. Used Git for code management and Firebase in both cases.

Volunteer Developer, Rescue App

03/2020 - 06/2021

Remote

Amidst the Coronavirus crisis at the beginning of March, seeing that in Spain thousands of people were lacking certain necessary health resources (masks, ventilators...), we gathered a team of 5 volunteer developers to create rescueapp.es in order to centralize offer and demand of said resources. We managed to respond quickly and develop the core app in less than a week. I was in charge of different aspects like developing JavaScript APIs (to connect our app with Typeform, Salesforce and with another app called Frena la curva) using AWS Lambda and API Gateway, and making certain improvements to the UI (developing Vue.js components).

C++ Developer, KRILL AUDIO

09/2018 - 09/2019

Málaga, Spain

Developed Krilloud, a Windows desktop application with connection to Unity and an audio engine integrated, playing different roles from the development of DLLs to the development of the app itself, including the design of the user interface. We were a small, self-organized team using Scrum and Bitbucket. We developed the app with .NET and C++, and used C# for the DLLs and Unity integration.

Experience

Fullstack Developer, Grupo AL

09/2017 - 09/2018

📍 Málaga, Spain

Development of web applications using Java EE, HTML, CSS and JavaScript. We used MySQL for the management of databases and JUnit for unit testing. Being my first job, at the end of the first week I was already fully integrated into the team and working as any other employee, being assigned tasks of increasing importance and responsibility.

Education

The AKKAdemy, AKKA Technologies

January 2020

📍 Geneva, Switzerland

One-month training in consulting and teamwork skills in Geneva with other engineers from all around the globe.

Gdansk University of Technology

2016-2017

📍 Gdansk, Poland

Erasmus student for a whole year.

E.T.S.I. Informática - University of Malaga

2013-2018

📍 Málaga, Spain

Bachelor's degree in Software Engineering (BSc).

Barling School

2011 & 2012

📍 Tampa Bay & Detroit, USA

One month-long language immersion courses in Tampa Bay, Florida and Detroit, Michigan.

Other Projects

International Graduate Consultant at AKKA Technologies (now AKKODIS)

2020

📍 Nice, France

We were developing a Virtual Reality app for Android (using Java) when the project got on hold due to the Coronavirus crisis. Being put under partial unemployment until new projects were available, I took this time to learn new technologies and improve my French skills.

Final thesis - Android App for Sharing Musical Resources

March-June 2018

📍 Málaga, Spain

Developed an Android app that lets the user easily build a music video with their own song and images and share it on social media using Instagram, YouTube and Facebook APIs. Used Android Studio and Java.
